

Providers v NCMEC

Tables 1–4 collect the transparency data released by service providers and NCMEC about CyberTipline reports and attached pieces, aggregated by organization and year. The parenthesized material after the organization name identifies the frequency of data disclosures as Q/H/Y for every 4/6/12 months and whether the provider proactively scans pictures (🖼️) or videos (🎬). Pinterest is marked “Q/H” because the firm releases quarterly aggregates every six months.

The Δ% column shows the percentage difference between the two report counts in terms of the mean. Identical entries are marked as ≡. Some of the percentage of all reports are too small to fit into the allotted three-digit precision and hence are marked as ε. Since years in the first column and total report counts in the last column are repeated for every service provider, the are presented in gray, thus making the table look less busy. Every provider is allotted the same space, leaving entries with no data blank, to avoid biasing the presentation.

Providers are sorted in descending order of report counts for 2024.
