

# 2025 Transparency Report (First Half)

January 1, 2025 – June 30, 2025

For Pornhub, nothing is more important than the safety of our community. Upholding our core values of **consent, freedom of sexual expression, authenticity, originality, and diversity** is only possible through the continual efforts to maintain the safety of our users and our platform. Consequently, we are firmly committed to preventing and eliminating illegal content, including non-consensual content and child sexual abuse material (CSAM). Every online platform has the moral responsibility to join this fight, and it requires collective action and constant vigilance.

Over the years, we have put in place robust measures to help protect our platform from abuse. We are constantly improving our Trust and Safety policies to better identify, flag, remove, review, and report illegal or abusive material. We are committed to doing all that we can to provide a safe online experience for our users, which involves a concerted effort to innovate and always striving to do more.

As part of our efforts and dedication to Trust and Safety, we feel it is important to continue providing information about the advancements to our Trust and Safety initiatives, technologies, moderation practices and how our platform responds to harmful content. This Transparency Report provides these insights and builds upon our previous reports. Further information can be found in other sections of our Trust and Safety Center, including [resources](#) about our community, keeping our platform safe, and our [policies](#).

We are committed to being as transparent as possible and to being a leader in removing abusive content from the internet. We will continue to do our part to create a safe space for our users.

## Trust and Safety Initiatives and Partnerships - 2025 First-Half Update

Our goal to achieve and set the highest level of Trust and Safety standards relies heavily on not only our internal policies and moderation team, but also on our array of external partnerships and technology. The organizations we partner with are part of the global effort to reduce illegal material online and help ensure our platform and adult users can feel safe.

We continued to further our Trust and Safety efforts and are proud to have added new partnerships and initiatives. Below is a non-exhaustive list of these, for the period from January 1, 2025 through June 30, 2025:

### Co-Performer Verification Requirements

All members of our Model Program have already been required to maintain identity documentation and consent to record and distribute for every performer appearing in their content. As of June 30, 2025, all existing content uploaded by members of the Model Program that we determined did not meet the ID and consent validation standards for each such performer, was deactivated.

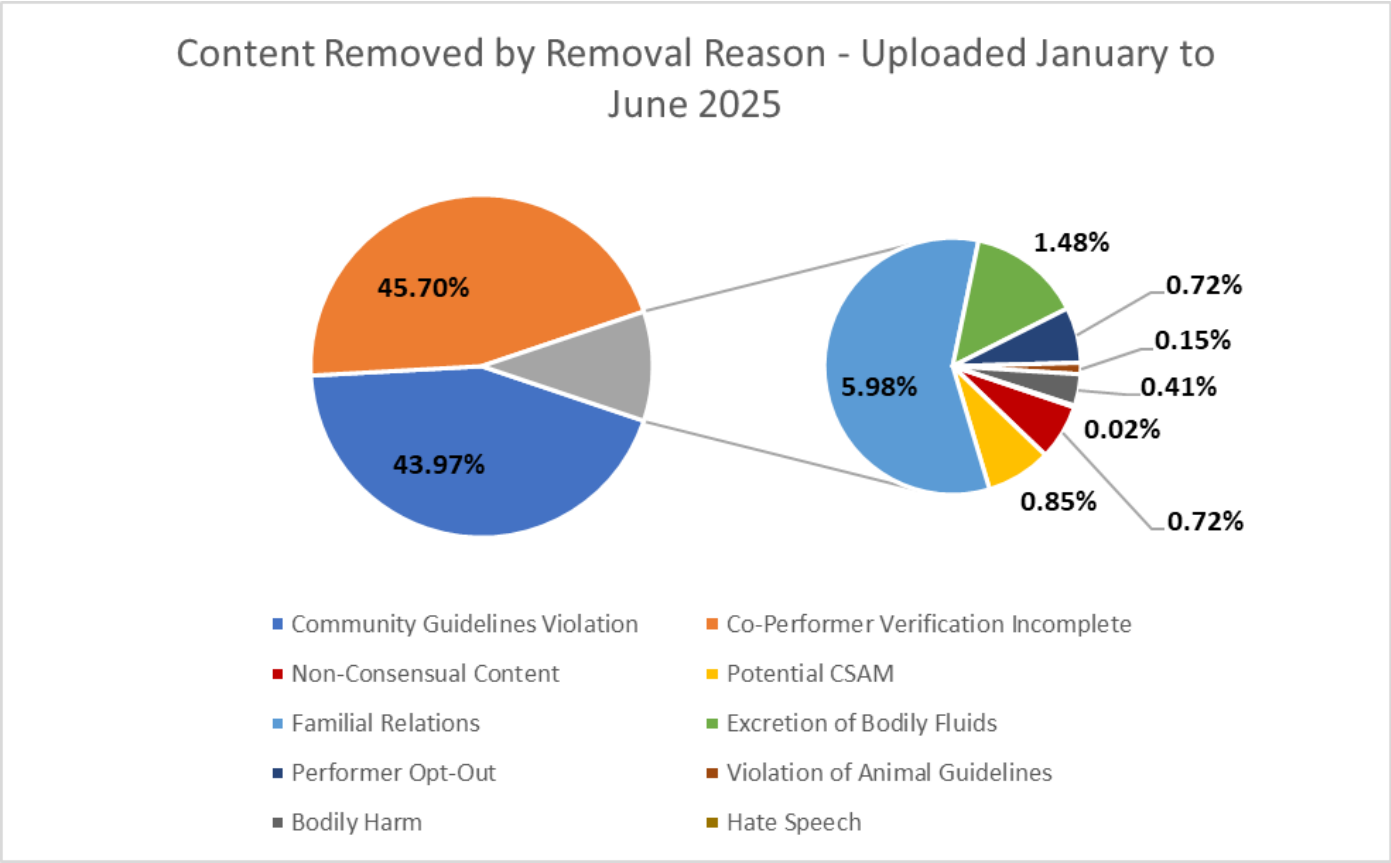

For a full list of Trust and Safety partnerships, initiatives and external technology, please refer to our [Trust and Safety Initiatives](#) page.

### Content Removals

A total of **1.29 million** (854,980 videos and 439,319 photos) pieces of content were uploaded to Pornhub in 2025 from January to June. Of these uploads, 1.05 million (645,057 videos and 402,169 photos) pieces of content were made available on Pornhub.

Of the 1.29 million pieces of content uploaded in the first six months of 2025, **107,126** (36,577 videos and 70,549 photos) were blocked at upload or removed for violating our [Terms of Service](#).

An additional 62,966 pieces of content (26,951 videos and 36,015 photos) uploaded prior to January 2025 were removed and labeled as Terms of Service violations, for a total of 170,092 pieces of content (63,528 videos and 106,564 photos) removed during the six-month period ending June 30, 2025, for violations of our Terms of Service.

*The above figure provides a breakdown, by removal reason, of content uploaded **and** removed in the first six months of 2025. For additional information and explanations of each removal reason, please see below.*

## Non-Consensual Content (NCC)

In the first half of 2025, we removed **3,138** pieces of content (1,760 videos and 1,378 photos) for violating our [NCC policy](#). When we identify or are made aware of the existence of non-consensual content on Pornhub, we remove the content, fingerprint it to prevent re-upload, and ban the user in accordance with our [Terms of Service](#).

Our NCC policy includes the following violations:

- Non-Consensual Content – Act(s): Content which depicts activity for which an individual did not validly consent. A non-consensual act is one involving the application of force directly or indirectly without the consent of the other person to a sexual act.
- Non-Consensual Content – Recording(s): The recording of sexually explicit activity without the consent of the featured person.
- Non-Consensual Content – Distribution: The distribution of sexually explicit content without the featured person's permission.
- Non-Consensual Content – Manipulation: This type of content depicts an individual's likeness without their consent (including "deepfakes" or other forms of AI-generated or manipulated content).

## **Potential Child Sexual Abuse Material**

We do not tolerate any content that features a person (real or animated) that is under the age of 18. That is, through our use of cutting-edge CSAM detection technology, identity verification measures, as well as human moderators, we strive to quickly identify and remove potential CSAM and ban users who have uploaded this content. Any content that we identify or are made aware of being potential CSAM is also fingerprinted to in an effort to prevent re-upload upon removal. We report all instances of potential CSAM to the [National Center for Missing and Exploited Children](#) (NCMEC).

In the first six months of 2025, we made **975** reports to NCMEC. These reports contained 1,744 pieces of content (1,451 videos and 293 photos) which were reported for violating our [CSAM Policy](#).

## **Community Guidelines Violations**

In the first half of 2025, we removed **85,055** pieces of content (45,319 videos and 39,736 photos) for violating our [Community Guidelines](#). When we identify or are made aware of the existence of content that violates our

Community Guidelines on Pornhub, we remove the content, and fingerprint it to prevent re-upload and/or ban the user, depending on the nature of the violation.

A portion of these removals are related to requests from individuals who previously consented to the distribution of content they appear in but have submitted a request to opt-out of their agreement. Individuals who wish to retract their consent may reach out to us via our [Content Removal Request](#) form.

Content may be removed for Community Guidelines violations, outside of any of the other reasons listed, for being objectionable or inappropriate for our platform. This also includes violations related to brand safety, defamation, and the use of our platform for sexual services.

## **Other Reasons for Removal**

### **Hate Speech**

We do not allow abusive or [hateful content](#) or comments of a racist, homophobic, transphobic, or otherwise derogatory nature intended to hurt or shame those individuals featured.

From January through June, we removed **30** pieces of content (24 videos and 6 photos) for violating our hate speech and violent speech policy.

### **Animal Guidelines**

Content that shows or promotes [harmful activity to animals](#), including exploiting an animal for sexual gratification, physical or psychological abuse of animals, is prohibited on our platform.

In the first six months of 2025, we removed **211** pieces of content (180 videos and 31 photos) for violating our Animal Guidelines.

## **Bodily Fluids**

Content depicting vomit, or feces, among others, is not permitted on Pornhub.

In the first half of 2025, we removed **1,771** pieces of content (1,733 videos and 38 photos) for violating our policy related to excretion of non-compliant bodily fluids.

## **Familial Relations**

We do not allow any content which depicts incest.

During the six-month period ending June 30, 2025, we removed **7,438** pieces of content (7,291 videos and 147 photos) for violating our policy related to familial relations.

## **Bodily Harm**

We prohibit excessive use of force that poses a risk of serious physical harm to any person appearing in the content or any physical or sexual activity with a corpse. This violation does not include forced sexual acts, as this type of content would be dealt with according to our non-consensual content policy.

In the first six months of 2025, we removed **568** pieces of content (545 videos and 23 photos) for violating our bodily harm and violent content policy.

## **Co-Performer Verification Incomplete**

We require uploaders to maintain valid documentation for any other individuals appearing in their content. We may, and do from time to time, for various reasons require uploaders to provide us with a complete set of documents that uploaders are required to maintain (and that they represent

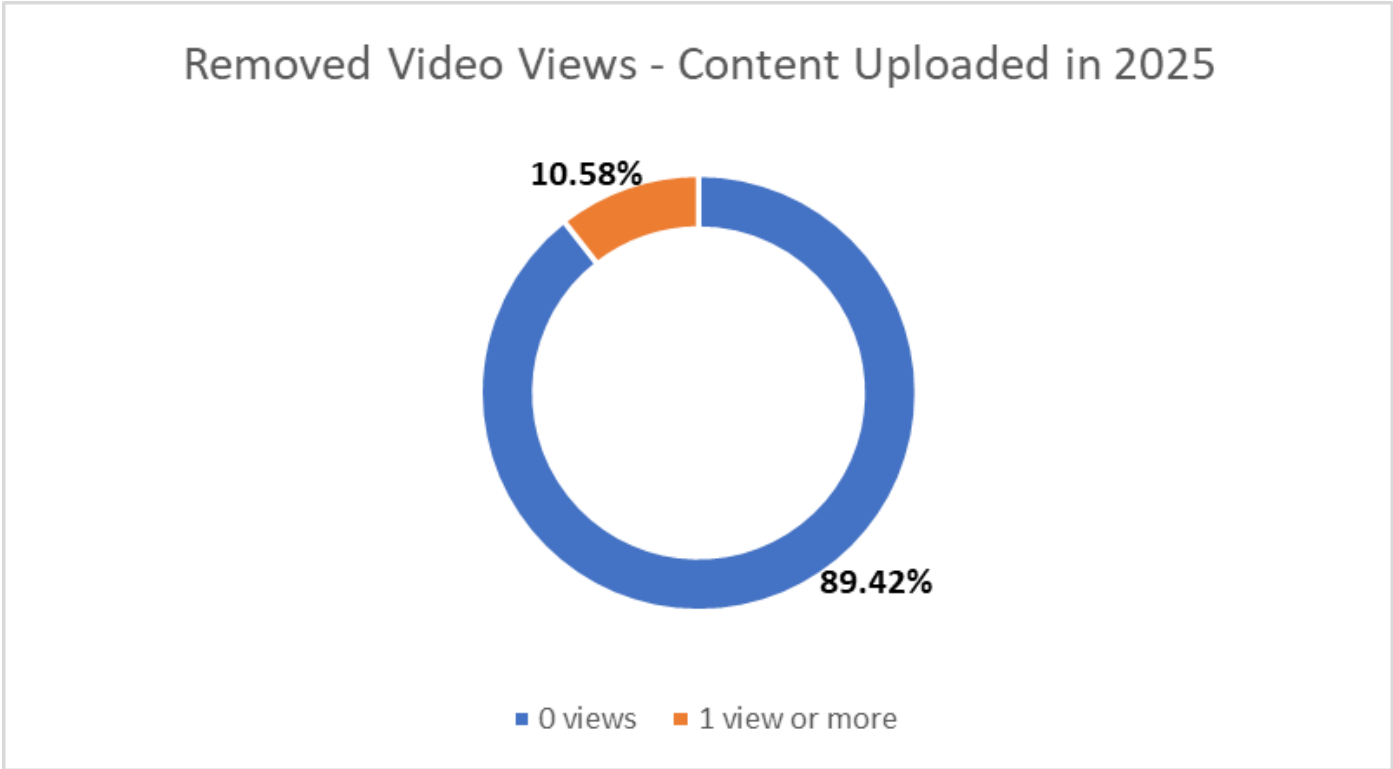

to us they do) for the purposes of verifying the identification of a co-performer. Failure to do so, or the provision of incomplete or inconclusive verification documents may lead to the removal of content and the banning of the uploader. Beginning in September 2024, we began requiring documentation for all performers in all content uploads.

In the first half of 2025, we removed **70,137** pieces of content (10,808 videos and 59,329 photos) for having incomplete verification of the co-performers depicted.

**Content Uploaded in January - June 2025**

An ongoing goal of our moderation efforts is to identify as much non-compliant content as possible at the time of upload before appearing live on Pornhub.

Videos uploaded in the first half of 2025 that were removed for violating our Terms of Service accounted for **0.698%** of total views of videos uploaded during that period.

*The above figure shows the number of times videos uploaded between January through June 2025 were viewed prior to their removal for Terms of Service Violations.*

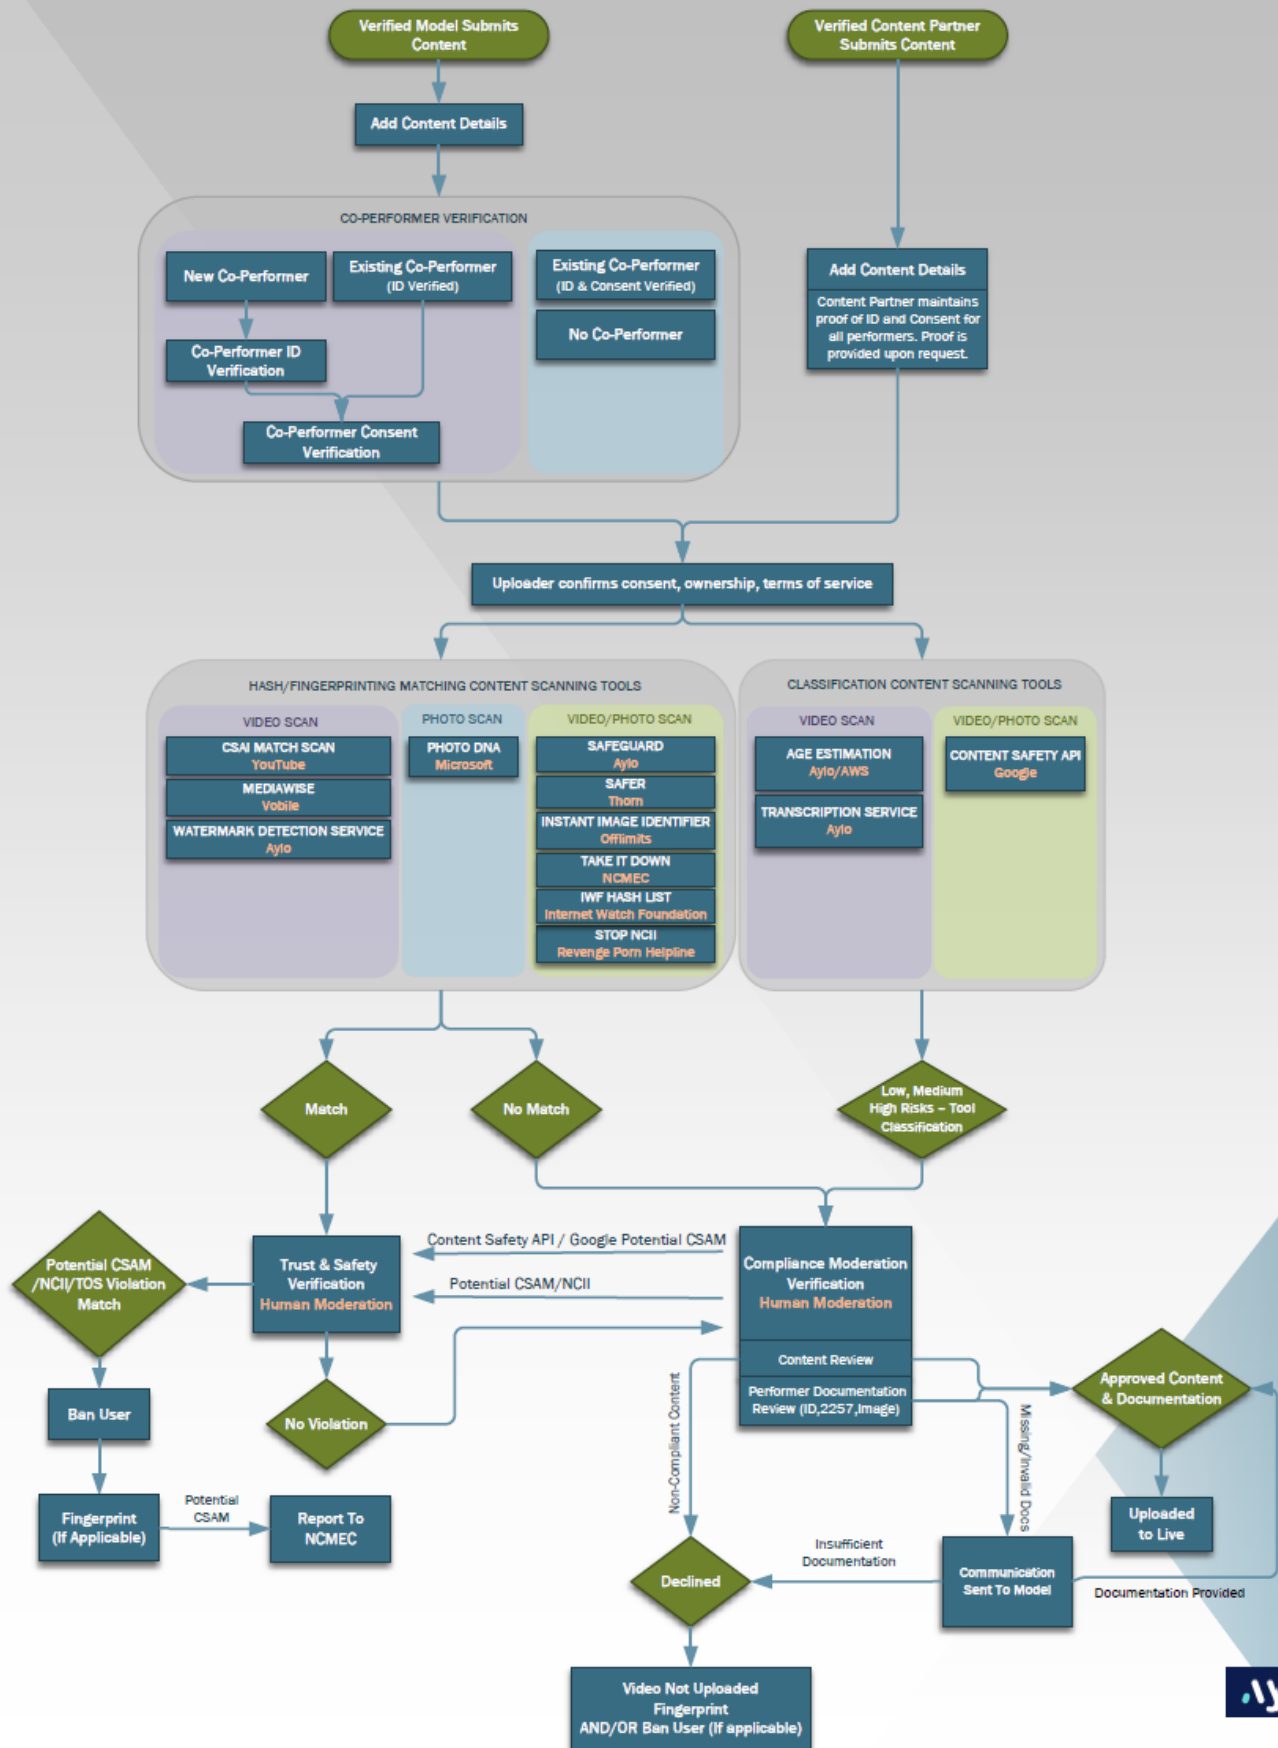

**Analysis:** *Nearly ninety percent of removed videos were identified and removed by our human moderators or internal detection tools before being viewed on our platform.*

## **Moderation and Content Removal Process**

### Upload and Moderation Process

As Pornhub strives to prevent abusive material on our platform, only verified uploaders, including content partners and members of the Model Program can upload content to our site. All members of the Model Program are required to verify their identity via a third-party identity documentation validation and identity verification service provider. Once verified, **all** content is reviewed upon upload by our trained staff of moderators before it is ever made live on our site. Uploads are also automatically scanned against several automated detection technologies as well as our internal tool for fingerprinting and identifying violative content, Safeguard. For more information about our verification and moderation process, please click [here](#).

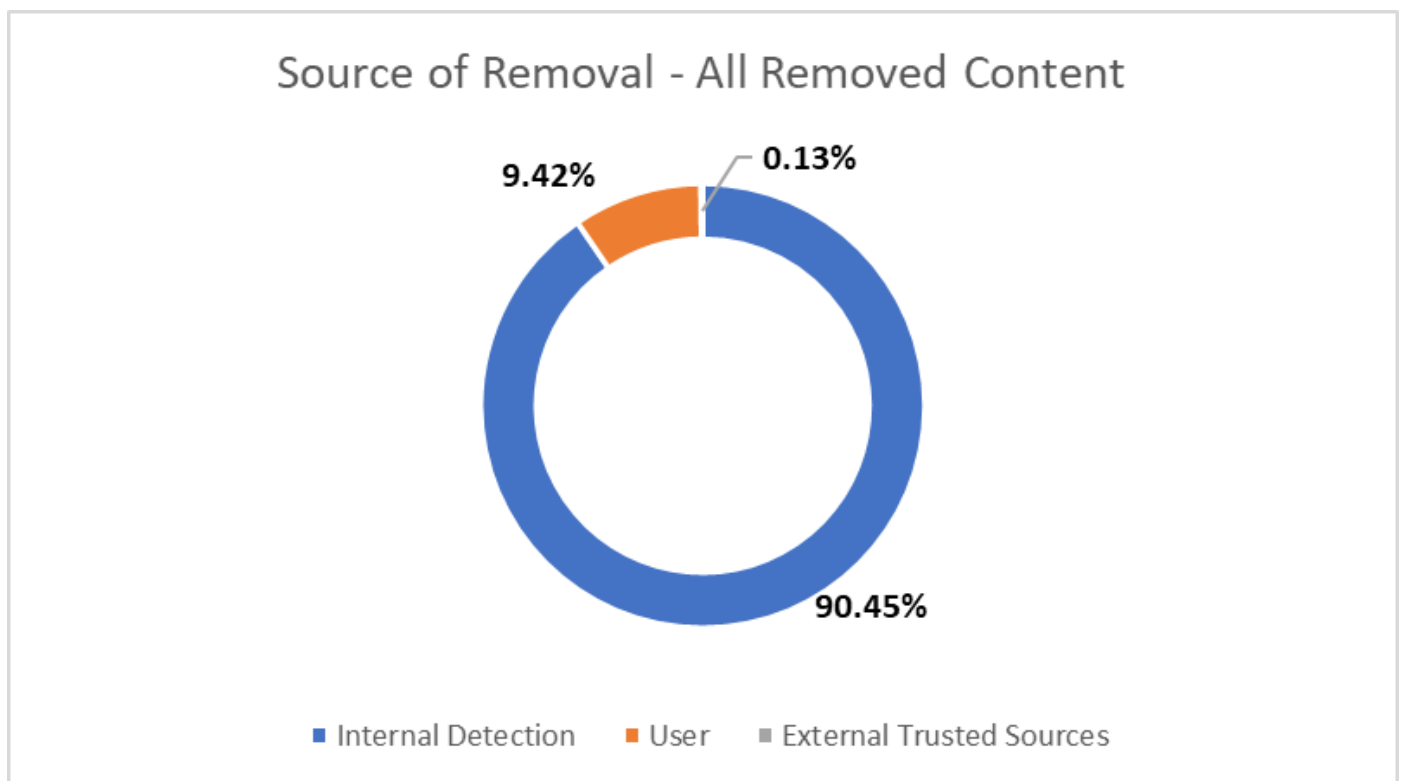

# Global Moderation / Compliance Content Upload Process

## Content Removal Process

Users may alert us to content that may be illegal or otherwise violates our [Terms of Service](#) by using the flagging feature or by filling out our [Content Removal Request](#) form.

While users can notify us of potentially abusive content, we also invest a great deal into internal detection, which includes technology and a 24/7 team of moderators, who can detect content that may violate our Terms of Service at time of upload and before it is published. Most of this non-compliant content is discovered via our internal detection methods.

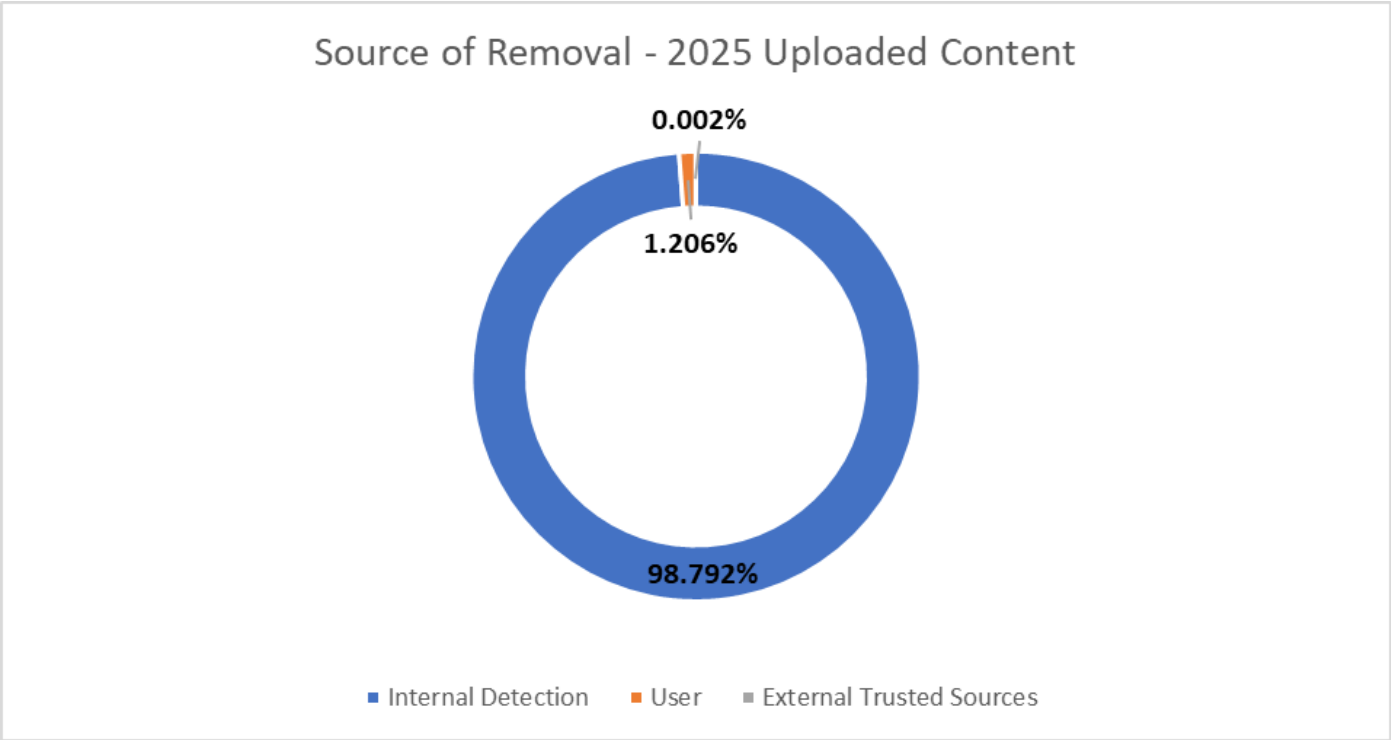

*The above figure shows a breakdown of removals based on the source of detection. In addition to internal and user-sourced removals, removals due to External Trusted Sources include legal requests and notifications from our [Trusted Flaggers](#).*

**Analysis:** *Of all the content that was removed for a TOS violation in the first six months of 2025, over 90% of content was identified via Pornhub's internal methods of moderation, compared to 9% of content being alerted*

to our team from our users.

As we add technologies and new moderation practices, our goal is to ensure that our moderation team is identifying as much violative content as possible before it is published. This is paramount to combatting abusive material and for creating a safe environment for our users. From content uploaded during the first six months of 2025, 98.79% of removals were the result of Pornhub’s internal detection methods.

*The above figure shows a breakdown of removals that were uploaded in the first half of 2025 based on the source of detection. See above for further information about the sources of removal.*

**Analysis:** *Of all the content that was uploaded and removed for a TOS violation during the first six months of 2025, 98.79% of content was identified via Pornhub’s internal methods of moderation, compared to 1.21% of content being alerted to our team from our users.*

**User-Initiated Removals**

While we endeavor to remove offending content before it is ever available on our platform, our users play an important role in alerting us to content that may violate our [Terms of Service](#). Users may bring this content to our attention by flagging content or submitting a content removal request. These features are available to prevent abuse on the platform, assist victims in quickly removing content, and to foster a safe environment for our adult community.

Users may alert us to content that may be illegal or otherwise violate our [Terms of Service](#) by using the flagging feature found below all videos and photos, or by filling out our [Content Removal Request](#) form. Flagging and Content Removal Requests are kept confidential, and we review all content that is brought to our attention by users through these means.

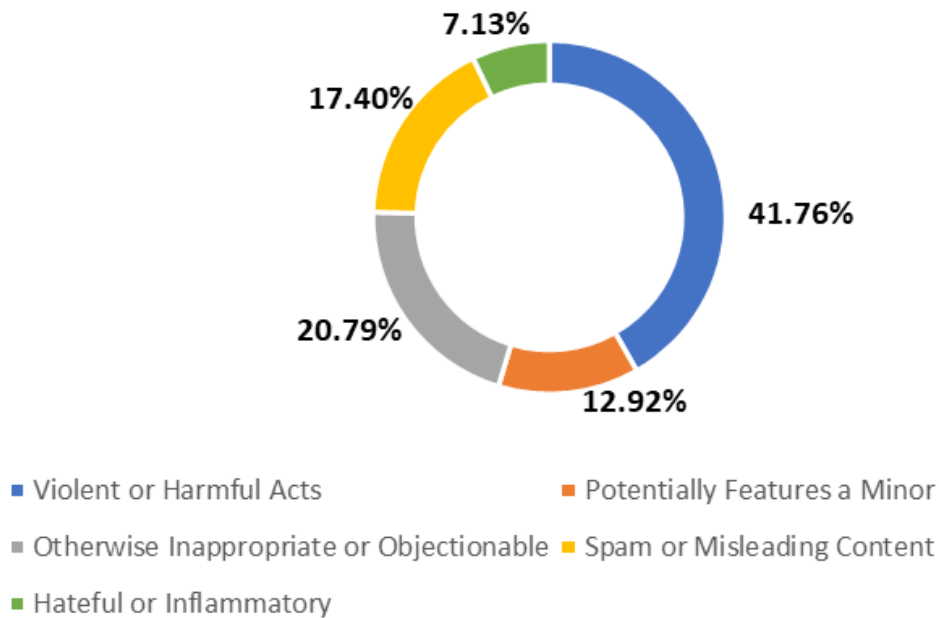

User-based removals accounted for 1.21% of all removals for content uploaded and removed in the first six months of 2025. After internal detection, user-based removals account for the largest percentage of removals overall, and specifically when identifying non-consensual content.

## **User Flags**

Users may flag content to bring it to the attention of our moderation team for the following reasons: Potentially Features a Minor, Violent or Harmful Acts, Hateful or Inflammatory, Spam or Misleading Content or Otherwise Objectionable or Inappropriate.

From January through June, content reported using the flagging feature was most often for "Violent or Harmful Acts" and "Otherwise Inappropriate or Objectionable", which accounts for nearly 62.55% of flags.

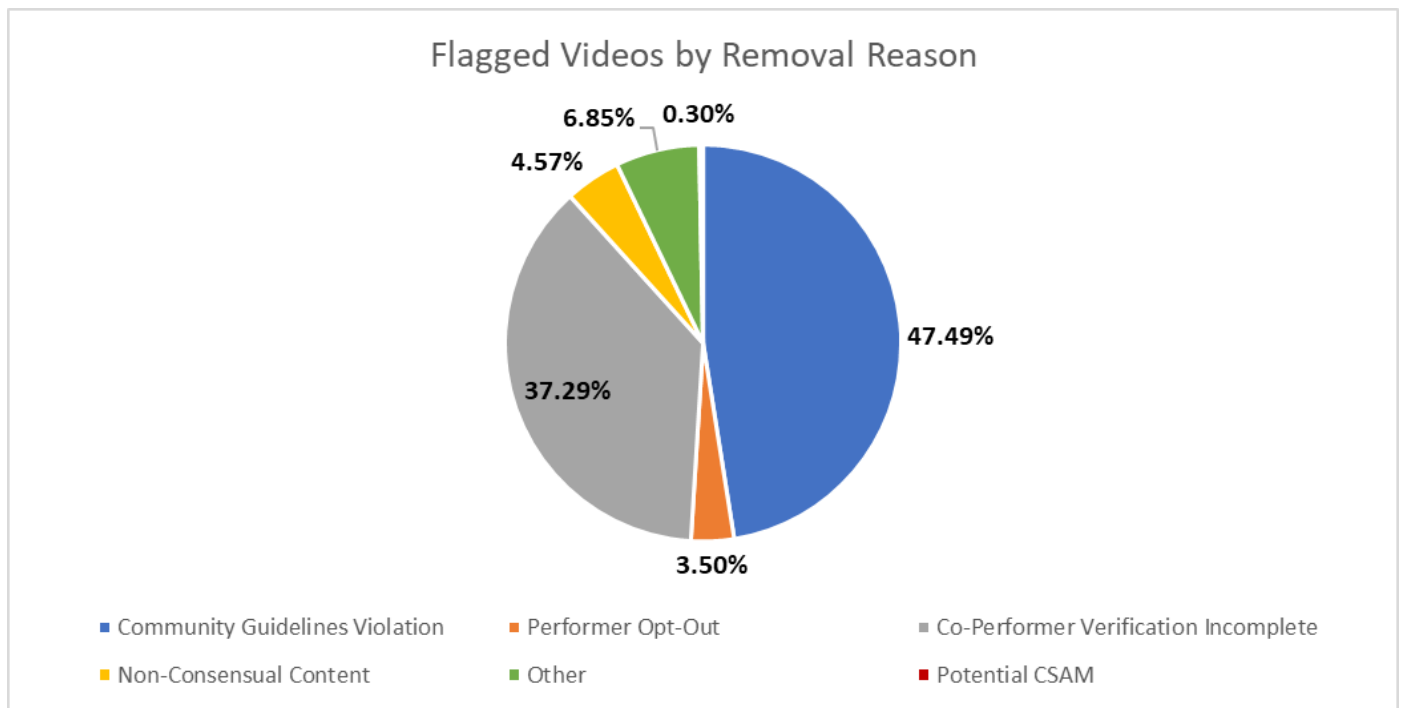

### Videos Flagged by Reason

*The figure above shows the breakdown of flagged videos received from users during the six-month period ending June 30, 2025. Note that there are additional flag reasons made available which, when selected, automatically redirect the user to the relevant reporting form in lieu of submitting a flag. Therefore, these reasons are not accounted for in the above figure.*

Upon receiving flags on videos and other content, our moderation team reviews the content and removes it if it violates our Terms of Service. Of the content removed after being flagged, most were removed due to Community Guidelines violations.

In addition to flagging content, users may also flag comments, users, and verified uploaders.

*The figure above shows a breakdown of reasons of why a video was removed after it had been flagged by a user. After review by our moderation team, most of the content removed was due to Community Guidelines violations.*

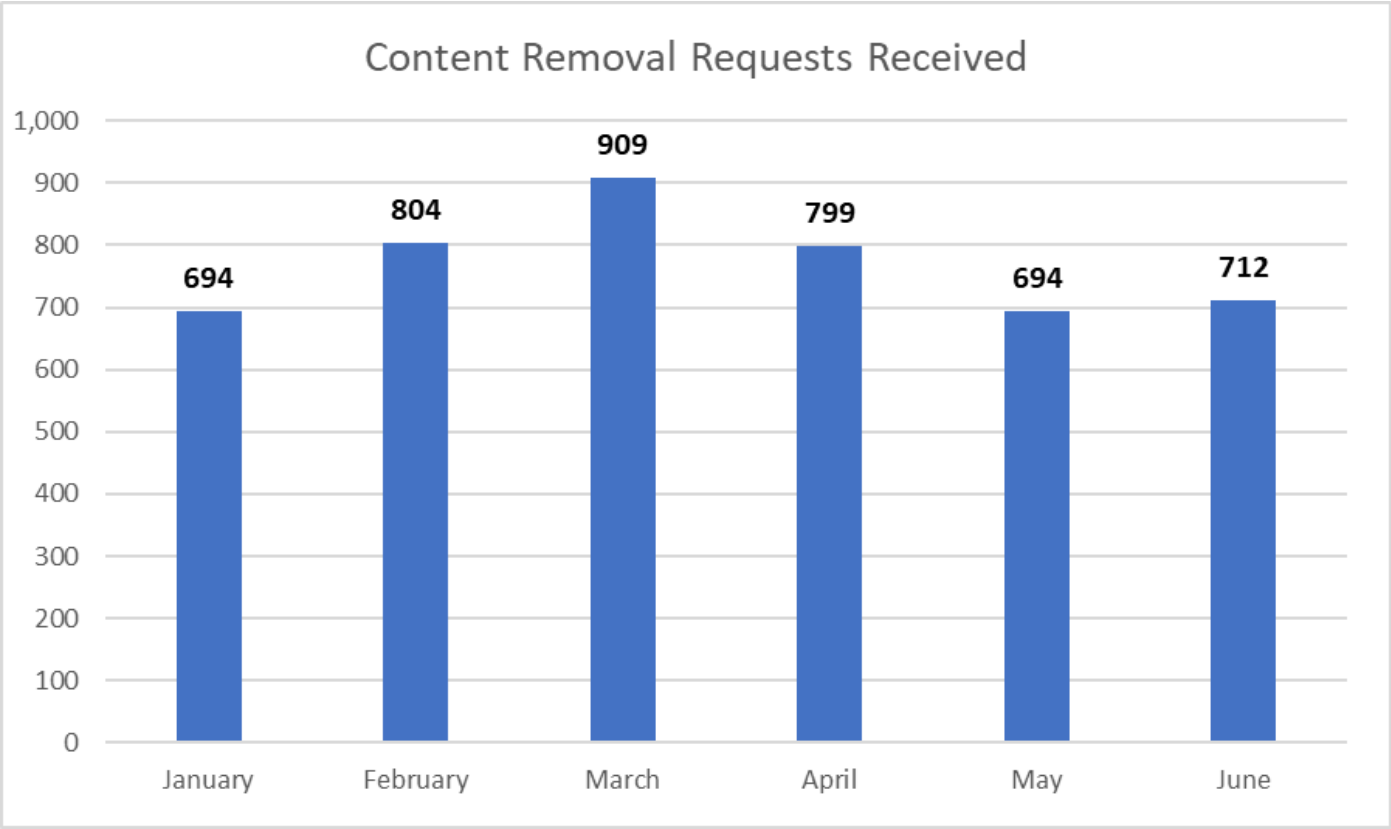

**Analysis:** *In the figure titled, “Videos Flagged by Reason”, the second largest category selected by users was “Otherwise Inappropriate or Objectionable”, which correlates to a Community Guidelines violation. Community Guidelines violations accounted for 47.49% of flagged videos that were removed.*

## Content Removal Requests

Upon receipt of a Content Removal Request, the reported content is immediately suspended from public view once the email address of the submitter is verified, pending investigation. This is an important step in assisting victims and addressing abusive content. All requests are reviewed by our moderation team, who work to ensure that any content that violates our [Terms of Service](#) is quickly and permanently removed. In addition to being removed, abusive content is digitally fingerprinted with both Mediawise and Safeguard, to prevent re-upload. In accordance with our

policies, uploaders of non-consensual content or potential CSAM will also be banned. All content identified as potential CSAM is reported to the [National Center for Missing and Exploited Children](#) (NCMEC).

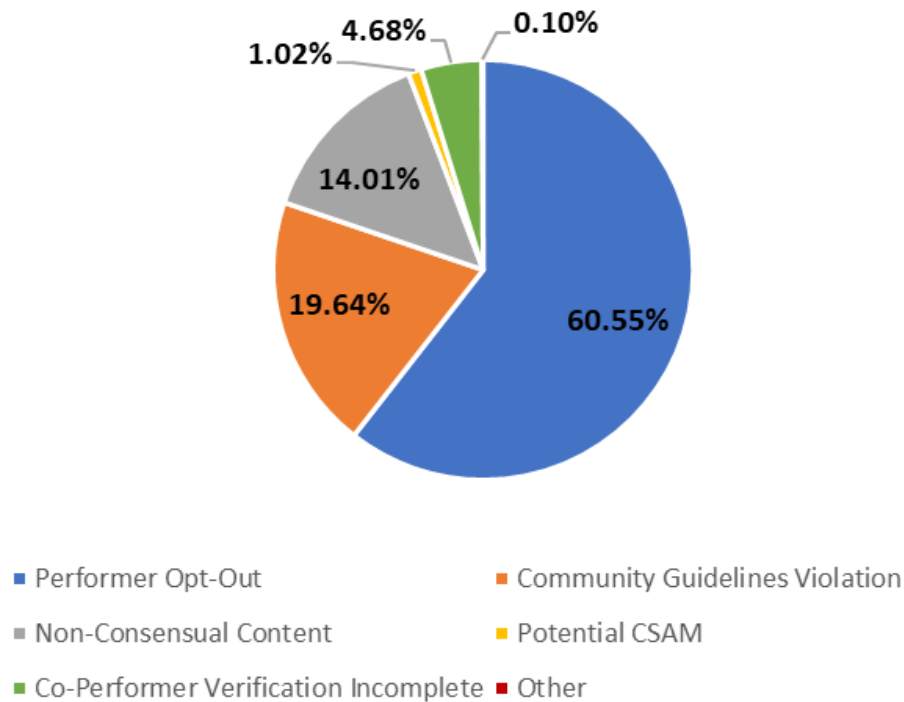

During the first six months of 2025, Pornhub received a total of 4,612 Content Removal Requests.

*The figure above shows the number of Content Removal Requests received by Pornhub per month in the first half of 2025.*

Of the content removed due to Content Removal Requests, the majority was removed for Performer Opt-Out.

### Content Removal Requests by Removal Reason

*The figure above displays the breakdown of removal reasons for content that was removed due to Content Removal Requests.*

**Analysis:** *More than half of the content that was removed due to a Content Removal Request was due to Performer Opt-Out, compared to 1.02% for Potential CSAM.*

### Reported Potential Child Sexual Abuse Material

We have a [zero-tolerance policy](#) against underage content, as well as the exploitation of minors in any capacity.

Pornhub is against the creation and distribution of child sexual abuse material (CSAM), as well as the abuse and trafficking of children. CSAM is one of many examples of illegal content that is prohibited by our [Terms of Service](#) and related guidelines.

Pornhub is proud to be one of the 1,400+ companies registered with the [National Center for Missing and Exploited Children](#) (NCMEC) Electronic

Service Provider (ESP) Program. We have made it a point to not only ensure our policies and moderation practices are aligned with global expectations on child exploitation, but also to publicly announce our commitment and support to continue to adhere to the [\*Voluntary Principles to Counter Online Child Sexual Exploitation and Abuse\*](#).

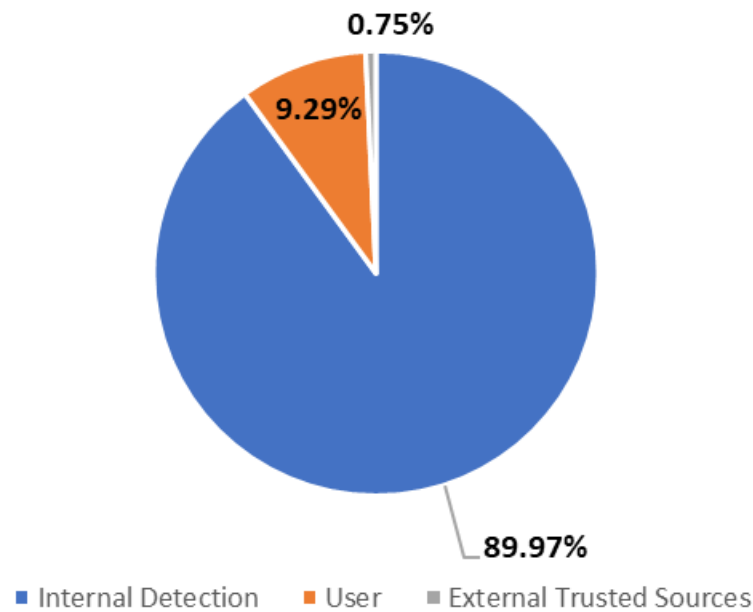

Potential child sexual abuse material that is detected through moderation efforts, including detection through various internal and external tools listed [here](#), or reported to us by our users and other external sources is reported to NCMEC. For the purposes of our [CSAM Policy](#) and our reporting to NCMEC, we deem a child to be a human, real or fictional, who is or appears to be below the age of 18. Any content that features a child engaged in sexually explicit conduct, lascivious or lewd exhibition is deemed potential CSAM for the purposes of our Child Sexual Abuse Material Policy.

## **Reported Potential CSAM**

In the first six months of 2025, we made **975** reports to the [National Center for Missing and Exploited Children](#) (NCMEC). These reports contained 1,744 pieces of content (1,451 videos and 293 photos) that were identified as potential CSAM. This content was uploaded by 800 user accounts. All of the 800 accounts were permanently banned on our platform, and no accounts were reinstated after being banned.

Internal detection was the greatest source of identifying potential CSAM that was removed in the first half of 2025. A portion of the content reported from users, including 5,007 user flags (4,978 flags submitted for videos, 29 flags submitted for photos), resulted in removal. User notifications accounted for under 10% of content reported during this time.

### Source of Removal - All Reported Potential CSAM

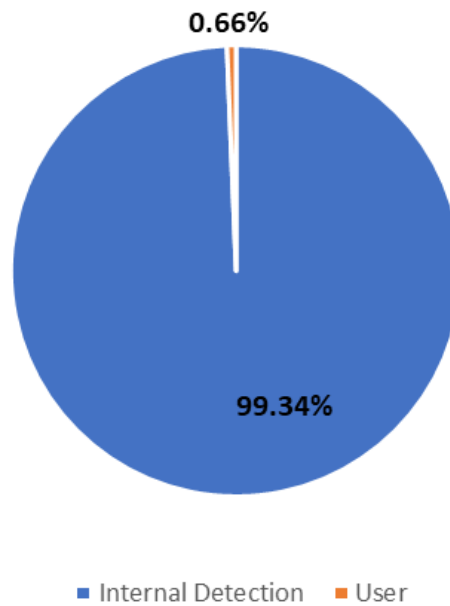

*The above figure shows a breakdown of reported potential CSAM based on the source of detection. In addition to internal and user-sourced removals, removals due to External Trusted Sources include legal requests and notifications from our [Trusted Flaggers](#).*

**Analysis:** *Of all the content that was reported as potential CSAM during the six-month period ending June 30, 2025, including content uploaded prior to 2025, nearly 90% of content was identified via Pornhub's internal methods of moderation, compared to 9.29% of content being alerted to our team from our users.*

For content uploaded between January through June that was reported as potential CSAM, 99.34% was identified through our internal detection methods.

### Source of Removal - 2025 Uploaded Potential CSAM

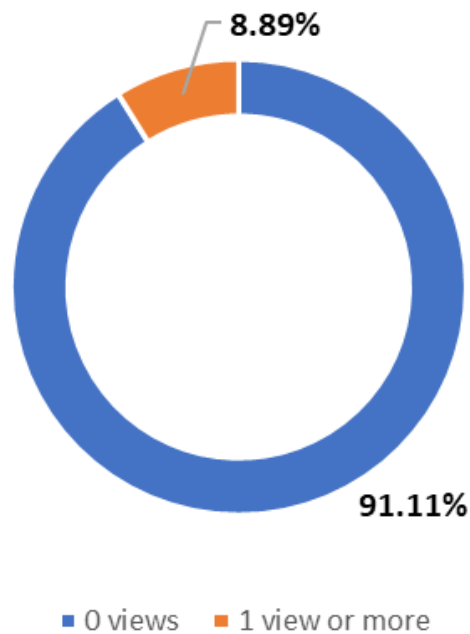

*The above figure shows a breakdown of reported potential CSAM based on the source of detection. In addition to internal and user-sourced removals, removals due to External Trusted Sources include legal requests and notifications from our [Trusted Flaggers](#).*

**Analysis:** *Of the content that was both uploaded and reported as potential CSAM in the first half of 2025, over 99% of content was identified via Pornhub's internal methods of moderation, compared to the remainder of content being alerted to our team from our users. None of this content was removed due to notifications from External Trusted Sources.*

As part of our efforts to identify and quickly remove potential CSAM and other harmful material, we strive to ensure this content is removed before it is available to users and consumers. Of the videos uploaded and reported as potential CSAM in the first half of 2025, which represents 0.10% of videos uploaded during that period, 91.11% were removed before being viewed.

Videos uploaded in the first six months of 2025 and removed for violating our CSAM policy accounted for 0.003% of total views of all videos uploaded in that period.

### Potential CSAM Views - 2025 Uploads

*The above figure shows the number of times videos uploaded in the first six months of 2025 were viewed prior to being reported as potential CSAM.*

**Analysis:** Over 90% of reported videos were identified and removed by our human moderators or internal detection tools before being viewed on our platform.

For all content removed and reported before being viewed on Pornhub, the majority was detected through our moderation and auditing processes.

| Source of Removal   | Number of Videos | Number of Photos | Total |
|---------------------|------------------|------------------|-------|
| Internal Moderation | 733              | 96               | 829   |
| Internal Audit      | 123              | 9                | 132   |
| Tools               | 101              | 0                | 101   |
| Total               | 957              | 105              | 1,062 |

*The above figure shows the source of detection for all content that was removed prior to appearing live that was reported from January through*

June.

**Analysis:** Over 90% of reported content that was identified before appearing on our platform was removed by our human moderators or during the audit process.

Of the content uploaded in the first six months of 2025 that was reported as potential CSAM after appearing on our platform, the majority was detected through our moderation and auditing processes.

Videos reported after appearing on our platform were viewed on an average of 4,087 times prior to removal, with a median number of views of 141. Videos were available for 22 days on average and a median of 20.5 days prior to initial removal.

| Source of Removal        | Number of Videos | Number of Photos | Total |
|--------------------------|------------------|------------------|-------|
| Internal Moderation      | 60               | 0                | 60    |
| Internal Audit           | 14               | 0                | 14    |
| Tools                    | 0                | 0                | 0     |
| Content Removal Requests | 2                | 0                | 2     |
| User Flags               | 0                | 0                | 0     |
| External Trusted Sources | 0                | 0                | 0     |
| Total                    | 76               | 0                | 76    |

The above figure shows the source of detection for all content that was removed after appearing live that was uploaded and reported from January through June.

**Analysis:** For content removed and reported after appearing live on the platform, over 97% of these removals were initiated due to internal moderation processes or tools.

**Non-Consensual Content**

Pornhub is an adult content-hosting and sharing platform for consenting adult use only. We have a [zero-tolerance policy](#) against non-consensual

content (NCC).

Non-consensual content not only encompasses what is commonly referred to as "revenge pornography" or image-based abuse, but also includes any content which involves non-consensual act(s), the recording of sexual material without consent of the person(s) featured, or any content which uses a person's likeness without their consent ("deepfakes" or other forms of AI generated or manipulated content).

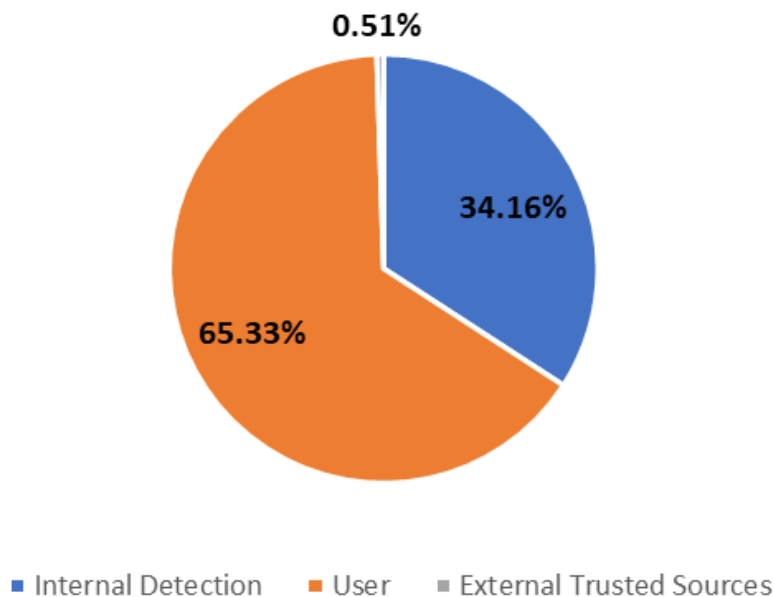

We are steadfast in our commitment to protecting the safety of our users and the integrity of our platform; we oppose all forms of non-consensual content.

From January through June, we removed 3,138 pieces of content (1,760 videos and 1,378 photos) for violating our [NCC policy](#). This content was uploaded by 728 user accounts. All of the 728 accounts were permanently banned on our platform, and no accounts were reinstated after being banned.

As part of our commitment to assisting victims of non-consensual content, we also proactively report incidents of non-consensual content where there is a suspected or apparent threat to life to the individual(s) involved. During this period, we made 11 such reports to appropriate law enforcement agencies, as determined by the location of the uploader of the associated content.

For all content removed for violating our NCC policy in the first six months of 2025, the majority of this content was removed after being reported by our users, at 65.33%.

### Source of Removal - All NCC

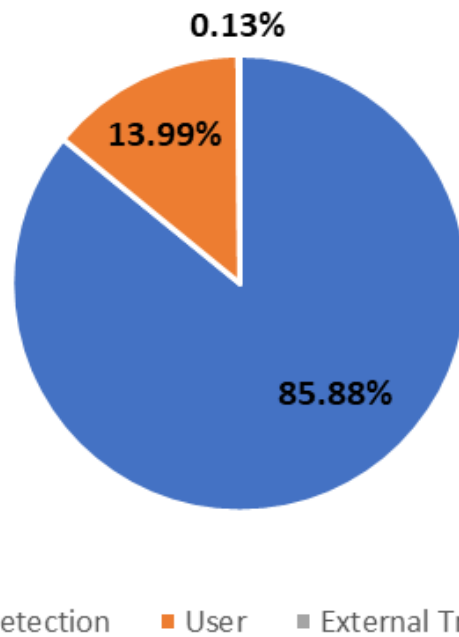

*The above figure shows a breakdown of NCC removals based on the source of detection. In addition to internal and user-sourced removals, removals due to External Trusted Sources include legal requests and notifications from our [Trusted Flaggers](#).*

**Analysis:** *Of all the content that was removed for violating our NCC policy in the first six months of 2025, including content uploaded prior to January 2025, 34.16% of content was identified via Pornhub's internal methods of moderation compared to 65.33% of content being alerted to our team from our users.*

Most of the content uploaded in the first half of 2025 and removed for a violation of our NCC policy was identified through internal detection, at 85.88%.

## Source of Removal - 2025 Uploaded NCC

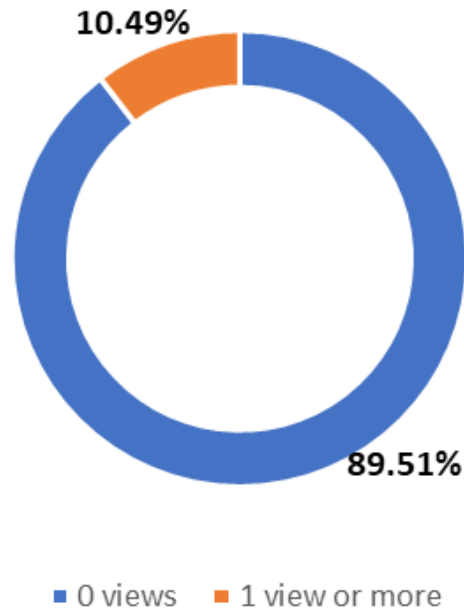

*The above figure shows a breakdown of NCC removals that were uploaded during the six-month period ending June 30, 2025, based on the source of detection. See above for further information about the sources of removal.*

**Analysis:** *Of all the content that was uploaded and removed for violating our NCC policy during the first six months of 2025, nearly 14% of content was removed after being alerted to our team from our users, compared to 85.88% of content identified via Pornhub's internal methods of moderation.*

As part of our efforts to identify and quickly remove non-consensual content and other harmful material, we try to ensure this content is removed before it is available to users and consumers. Of videos both uploaded and removed for violating our NCC policy in 2025 from January through June, which represents 0.07% of videos uploaded during this time, over 89% were removed before being viewed.

Videos uploaded in the first six months of 2025 and removed for violating our NCC policy accounted for 0.014% of total views of all videos uploaded in the first half of 2025.

## NCC Views - 2025 Uploads

*The above figure shows the number of times videos uploaded in the first six months of 2025 were viewed prior to being removed for violating our NCC policy.*

***Analysis:*** *Nearly 90% of videos were identified and removed by our human moderators or internal detection tools before going live on our platform.*

For all content removed for violating our NCC policy before being viewed on Pornhub, the majority was detected through our moderation and auditing processes.

| Source of Removal   | Number of Videos | Number of Photos | Total |
|---------------------|------------------|------------------|-------|
| Internal Moderation | 173              | 96               | 269   |
| Internal Audit      | 513              | 285              | 798   |
| Tools               | 40               | 0                | 40    |
| Total               | 726              | 381              | 1,107 |

*The above figure shows the source of detection for all content that was removed prior to appearing live that was removed in the first six months of 2025.*

**Analysis:** Over 96% of content that was identified and removed before appearing on our platform was removed by our human moderators or during the audit process.

Of the content uploaded in the first six months of 2025 that was removed for violating our NCC policy after being viewed on our platform, the majority were due to content removal requests.

Videos removed after appearing on our platform were viewed on an average of 25,024 times prior to removal, with a median number of views of 6,742. Videos were available for 32 days on average and a median of 27 days prior to initial removal.

| Source of Removal        | Number of Videos | Number of Photos | Total |
|--------------------------|------------------|------------------|-------|
| Internal Moderation      | 2                | 0                | 2     |
| Internal Audit           | 4                | 0                | 4     |
| Tools                    | 0                | 0                | 0     |
| Content Removal Requests | 58               | 0                | 58    |
| User Flags               | 0                | 0                | 0     |
| External Trusted Sources | 0                | 0                | 0     |
| Total                    | 64               | 0                | 64    |

The above figure shows the source of detection for content that was uploaded and removed after appearing live during the first six months of 2025.

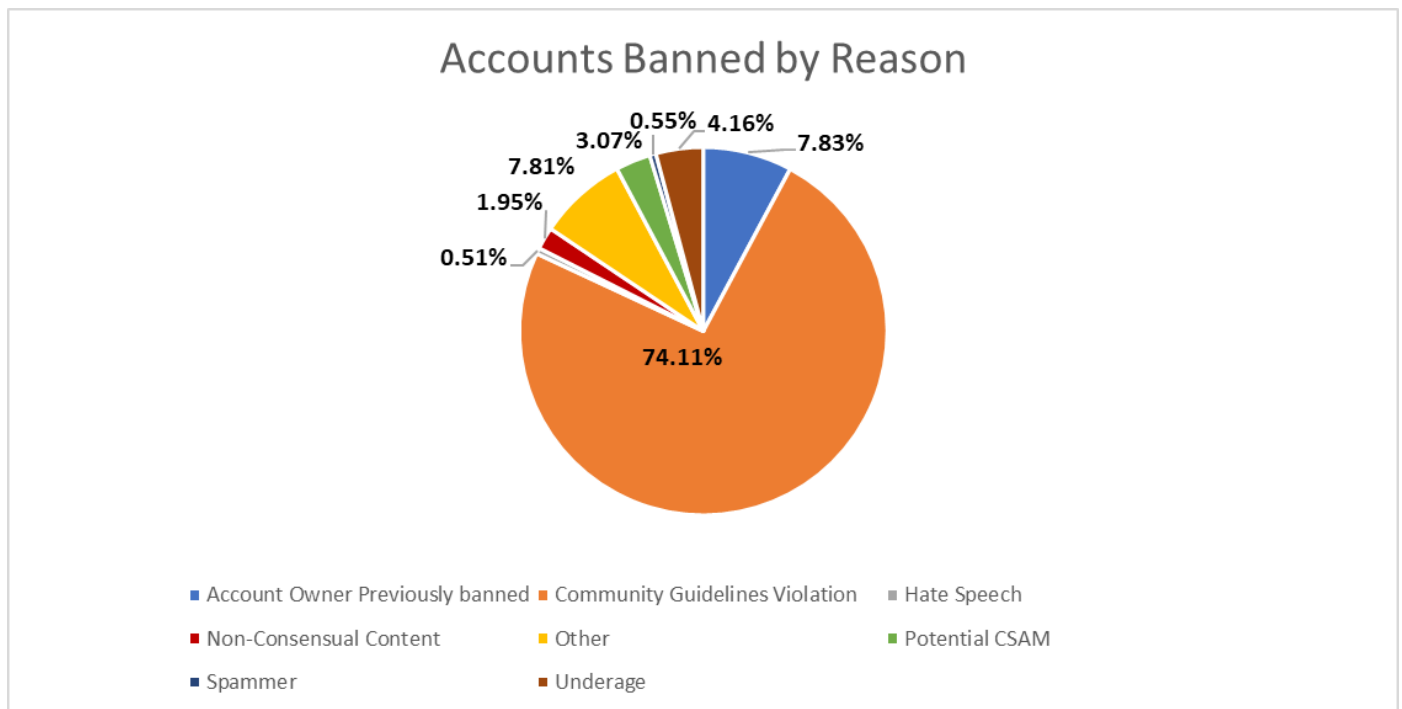

**Analysis:** For content removed after appearing live on the platform, user-initiated removals accounted for 90.63% of these removals.

We have continued to strengthen our policies surrounding uploader requirements for providing identity verification and consent documentation for all performers in content. As of June 30, 2025, all existing content uploaded by members of the Model Program that we determined did not meet the ID and consent validation standards for each such performer, was deactivated.

## Banned Accounts

As part of our efforts to ensure user and platform safety, we ban accounts that have committed serious or repeated violations of our [Terms of Service](#). Additionally, accounts that have violated our [CSAM Policy](#) are reported to the [National Center for Missing and Exploited Children](#) (NCMEC).

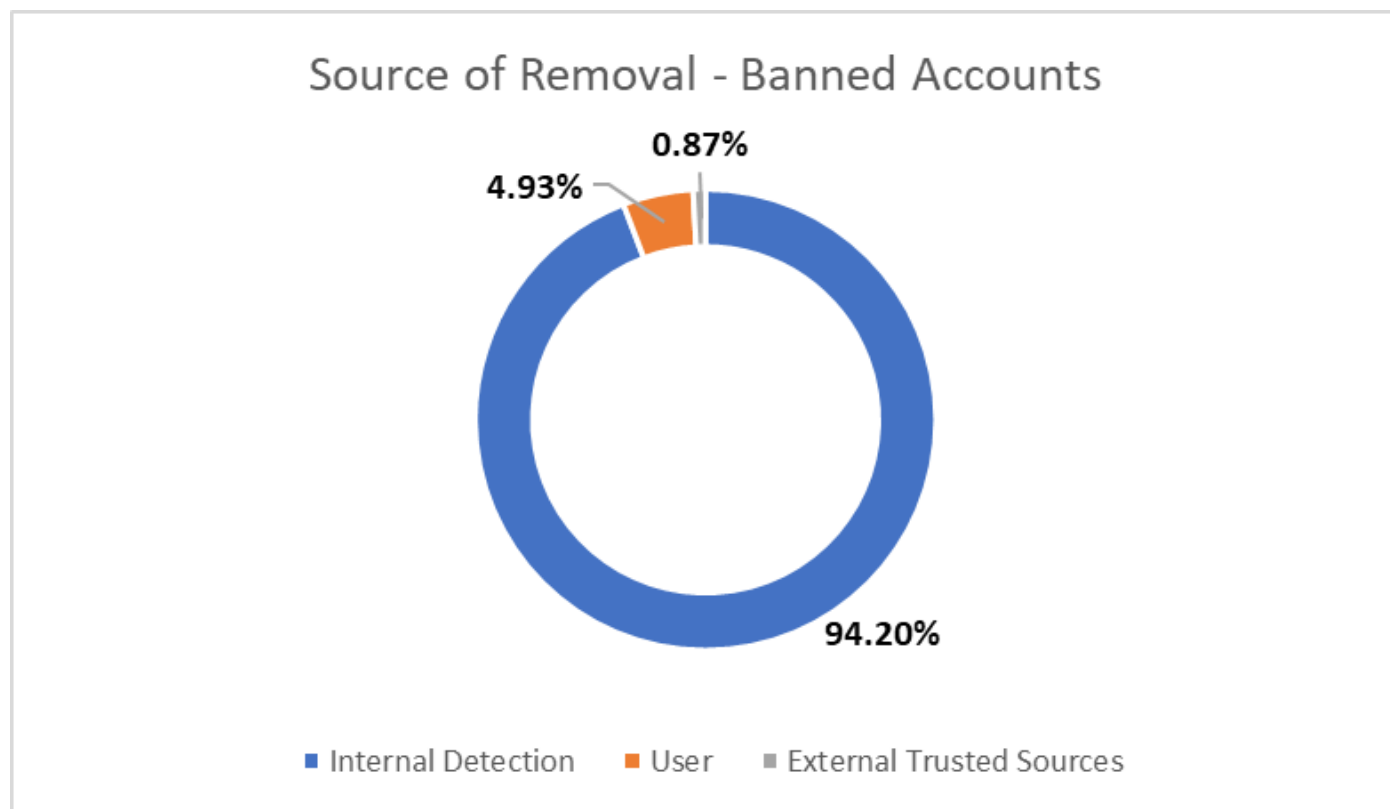

In the first six months of 2025, we banned a total of **22,051** user accounts for violating our Terms of Service. This includes accounts that were banned for uploading content that was removed, as well as accounts that were banned for violations not related to content, such as spamming. Additionally, an account may be banned at the time of verification if we detect that the account belongs to an individual whose previous account was banned for violating our Terms of Service.

*The above figure shows the breakdown by ban reason for accounts that were banned in 2025 from January through June.*

**Analysis:** Nearly 75% of accounts were banned for a Community Guidelines violation, while 7.83% of accounts were banned, as they were identified as belonging to an individual whose previous account(s) was/were banned.

The majority of accounts banned during this period were identified by our internal detection methods.

*The above figure shows a breakdown of banned accounts based on the source of detection. In addition to internal and user-sourced removals, removals due to External Trusted Sources include legal requests and notifications from our [Trusted Flaggers](#).*

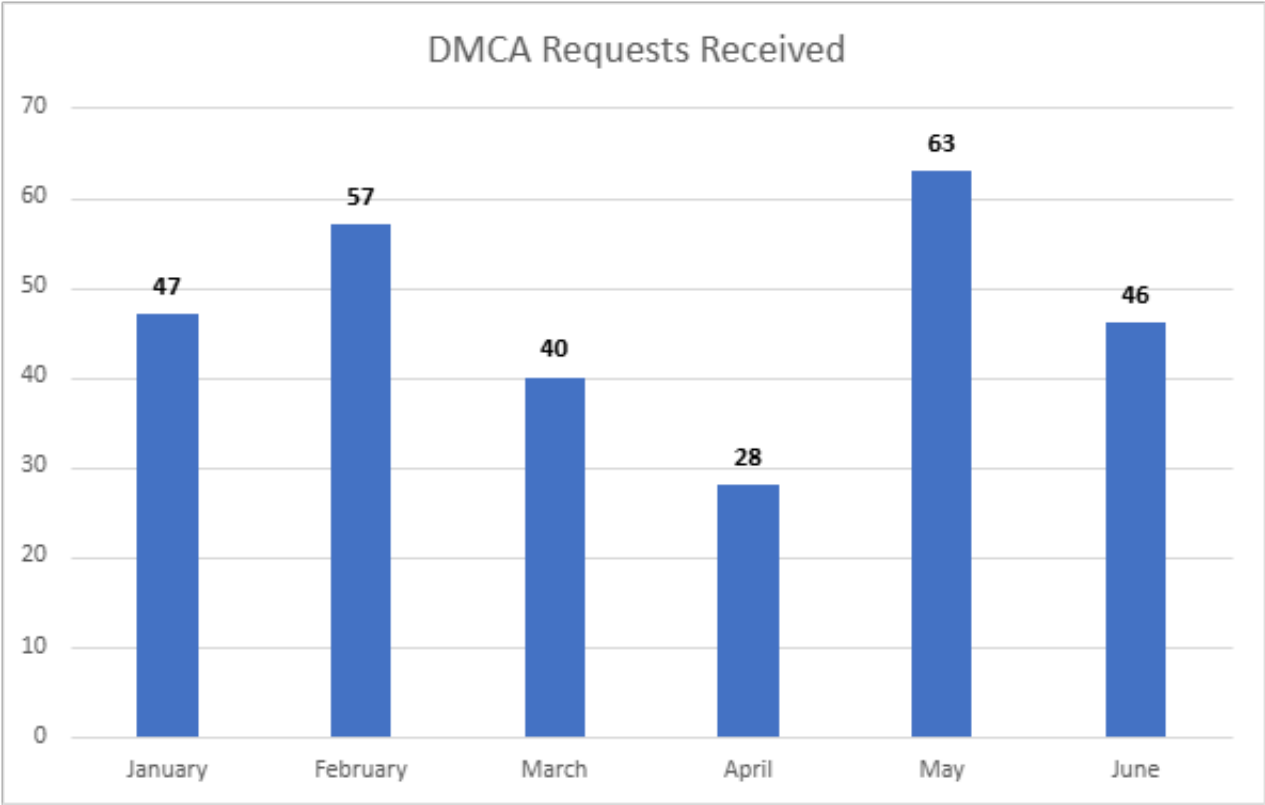

**Analysis:** *Of the accounts that were banned in the first six months of 2025, over 94% were identified due to internal detection methods, while user notifications accounted for nearly 5% of banned accounts.*

## DMCA

The *Digital Millennium Copyright Act*, known as the DMCA, is an amendment to existing U.S. copyright law to address parts of its application on the internet. This includes establishing protections for online service providers if their users engage in copyright infringement, by creating a notice-and-takedown system which allows copyright owners to notify online services

about infringement so that the material can be taken down. Service providers must have a process in place to receive DMCA notices and to remove applicable content and must have (and implement) a policy to deter infringement by enforcing a repeat infringement policy. Pornhub promptly responds to requests relating to copyright notifications.

In addition to blocking uploads of works previously fingerprinted with Mediawise or Safeguard from appearing on Pornhub, during the six-month period ending June 30, 2025, we responded to **281** requests for removal, leading to a total of **1,437** pieces of content (1,345 videos and 92 photos) removed.

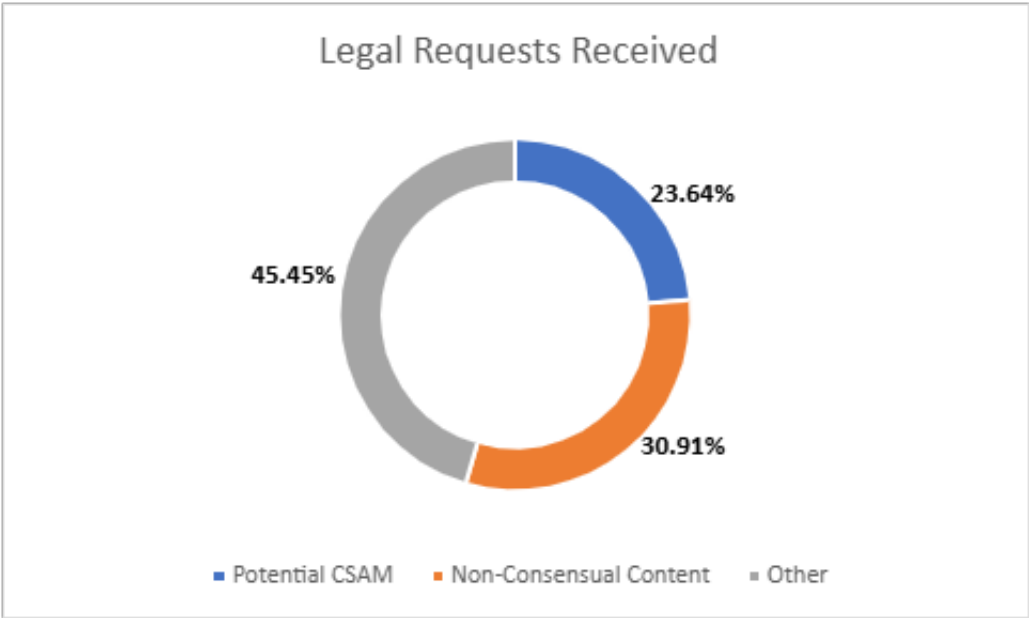

The above figure shows the number of requests for removal related to DMCA per month in the first half of 2025.

**Cooperation with Law Enforcement**

We cooperate with law enforcement globally and readily provide all information available to us upon request and receipt of appropriate

documentation and authorization. Legal requests can be submitted by governments and law enforcement as well as private parties through our legal request portal. The portal allows law enforcement and other legal entities to indicate if content or a user on Pornhub is the subject of their request, which allows our team to provide the requested information and take actions on the reported content or account, where appropriate.

In the first half of 2025, we responded to **110 legal requests**. A breakdown by request type as indicated by law enforcement is provided below.

*The above figure displays the number of requests Pornhub received from law enforcement and legal entities in the first six months of 2025, broken down by the type of request as indicated by the requester. Of these requests, 26 were indicated as potential CSAM or child exploitation, and 34 were indicated as Non-Consensual Content.*

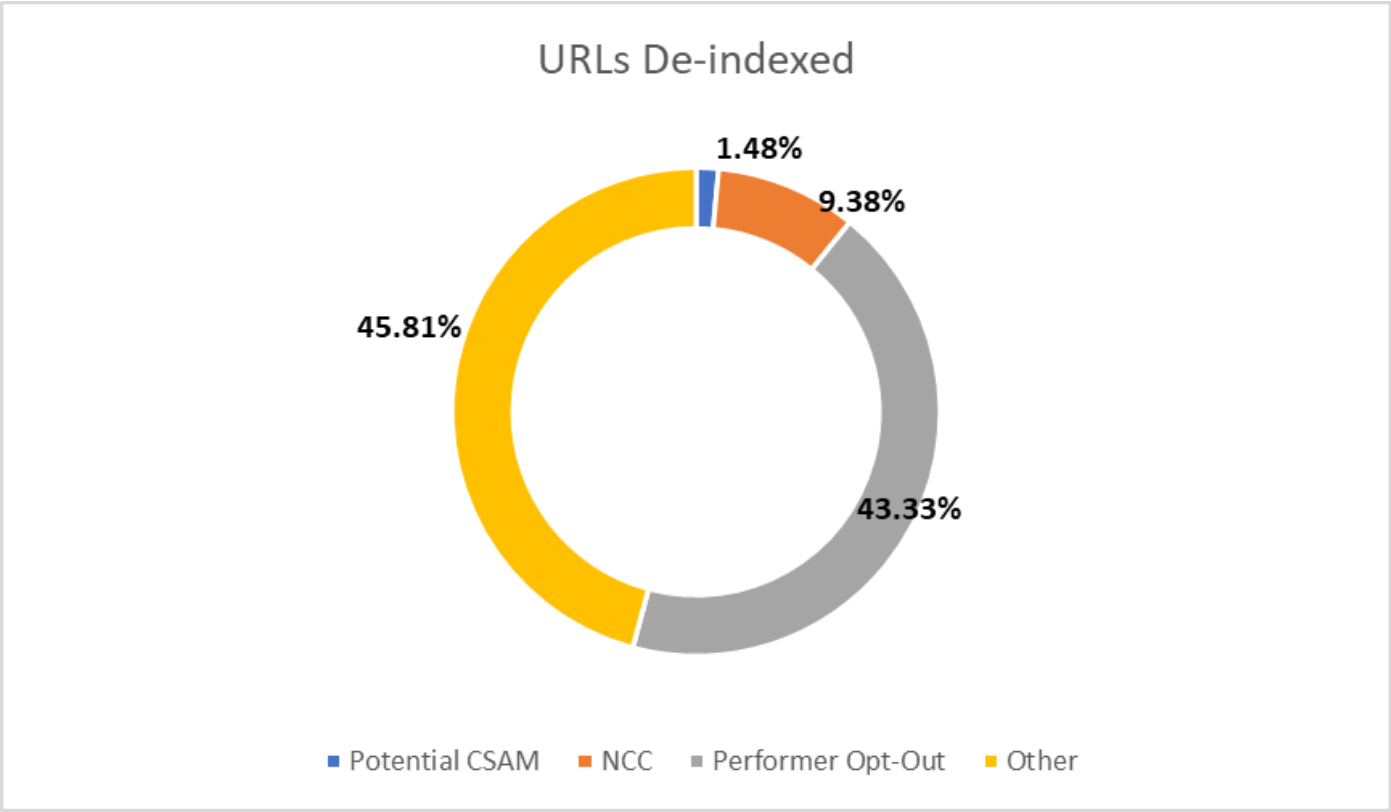

As a result of these requests, we classified **1 video** as a Community Guidelines violation during this period.

**Content De-Indexing**

As part of our Trust and Safety efforts to remove abusive content not only from our platform, but globally, we request de-indexing of URLs that were

removed for violating our [Terms of Service](#) from the largest search engines. We proactively seek to de-index all content that is removed for potential CSAM, non-consensual content, and performer opt-out.

In the first half of 2025, we requested de-indexing of **53,743** URLs for 18,044 unique pieces of content.

*The above figure displays a breakdown of the reason for URLs that were de-indexed from search engines. There may be several URLs de-indexed per piece of content, as we request the de-indexing of every published version of the URL (e.g. `it.pornhub.com/123` would be a URL de-indexed for the content located at `www.pornhub.com/123`).*
